

IMPORTANT INFORMATION

- The vaporiser is NOT intended for use by persons (including children & the elderly) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they are supervised by the person responsible for their safety.
- Keep clear of the Steam Vent. STEAM CAN CAUSE SCALDING. **KEEP OUT OF CHILDREN'S REACH.**
- The power cord **MUST** be unplugged from the power source before filling, cleaning or moving.
- **DO NOT** operate the heating module when it is separated or removed from the base.
- Do not dismantle or unscrew any parts of the Vaporiser. Modifying, forcibly opening or damaging the unit will void the warranty.
- **DO NOT OVERFILL THE BOWL BASE.** Overfilling will cause the device to perform inefficiently and can lead to water overflowing or spitting and cause damage to furnishings and flooring.
- The supplier will not be responsible for damage caused by misuse of the unit.
- Use only the TAAV Mentholaire Vaporiser Fluid that has been specially formulated for your vaporiser. Applying other brands of inhalant fluid may void your warranty.
- TAAV Vaporizer Cleaning Tablets help prevent buildup of residue/scale.

TAAV VaporPRO T2020 Vaporiser 3 YR WARRANTY

Your TAAV VaporPRO T2020 Vaporiser is covered by a McGloins-Supertex Pty Ltd warranty for a period of 3 years, from the date of purchase against defects in workmanship and materials. The warranty is additional to the conditions and warranties which are mandatory as implied by the Trade Practices Act 1974.

The warranty only covers the unit not working to its design and manufacturing specifications and only covers units use in Australia and New Zealand.

The warranty is only valid with a receipt of purchase - 3 year warranty from date of purchase.

The warranty does not cover negligent handling, tampering or if not used in accordance to instructions.

Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and compensation for any other reasonably foreseeable loss or damage.

You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

To obtain service under this warranty, product can be returned to your place of purchase with a copy of the sales receipt as proof of purchase.

We suggest you keep a copy of your sales receipt with this instruction leaflet and keep this leaflet with your TAAV Vaporiser for reference.

OPERATING INSTRUCTIONS

Simple to Operate, Easy to Clean

Latest Technology Without Fuss

Tottle-safe Flat Design

Built-in Auto Cut-Out; Safety Light

Long Running Time, Whisper Quiet

Generates Steam for up to 20+ hours

Suitable for all ages

TAAV VaporPRO T2020 Vaporiser OPERATING INSTRUCTIONS

IMPORTANT: For optimal use of your vaporiser, please read these instructions first. It contains important information for safety and maintenance.
Failure to follow the instructions may void your warranty.
Please save this for future reference.

KNOWING YOUR TAAV VaporPRO T2020 VAPORISER

PREPARING FOR USE

1. Remove unit from box and unravel the power cord.

CORD CAUTION: Do not forcibly bend, pull or distort the cord as this could cause damage. Do not place heavy objects on it or allow the power cord to be caught or crushed. Be sure to hold the electrical plug, not the cord, when disconnecting from the power point. If the cord is damaged, it must be replaced. Refer to your warranty and/or contact your supplier.

2. Filling the Bowl Base.

Twist the Heating Element in an anti-clockwise direction to dislodge, then lift to remove from Bowl Base.

If using for the first time, we advise placing two TAAV Vaporiser Cleaning Tablets in the bowl before filling with water. Do this after intervals of two or three uses to maintain operating efficiency of the device. In hard water areas, we recommend cleaning after every use.

If using inhalant, pour in 5 -10ml of TAAV Mentholaire Vaporizer Fluid first before the water. Then mix well.

Do not go above the Maximum Fill Line. **DO NOT OVERFILL.** The unit performs less efficiently when overfilled. Steaming takes longer to start and generates less in volume, and may cause the boiling water to spit.

* Only use TAAV branded inhalants. **TAAV Mentholaire Vaporizer Fluid** has been specially formulated to optimise efficiency of this product. Other inhalants may adversely affect operation and void your warranty.

3. Replace the Heating Element into the base.

Place element into the bowl and turn it clockwise until it clicks and is safely locked in.

4. Place in ventilated room

When moving the Vaporiser, always handle by the bowl.

Position the Vaporiser on the floor about 1.2m from the patient.

We recommend you place **a mat or towel down first for floor or carpet protection.**

Do not place the Vaporiser where it can be pulled or fall down or knocked over. Do not place in a confined space such as a cabinet or under a shelf. Care must be taken due to the emission of hot water vapour (steam). Do not aim steam flow directly onto the patient, walls or furniture. Steam-generating products can cause condensation which may affect furnishings, paintwork, wall paper and other fittings. Always leave a window slightly opened when safe to do so, or a door ajar when the unit is in operation.

YOUR VaporPRO T2020 IS NOW READY TO USE

1. **Plug the power cord to the power source and turn it on.** Keep the power cord flat and out of the way. The orange safety light is an indication that the unit is drawing power to heat. *(Note if maximum temperature is reached when unit is empty, the light will turn off until unit cools down before starting again).*
2. **After 3-6mins, steam is generated** and lasts approximately 16 hours on one fill (up to the Maximum Fill Line). Make sure the Bowl is sufficiently filled for each use.
3. **The unit cuts off automatically** when the water level is very low dropping to below the minimum required amount. The orange safety light will turn off for the time the Heating Element is not drawing power and cooling down. *Note the light will come back on after the unit cools down and the unit will heat up again but no steam will be emitted unless more water is added.*
For the unit to generate more steam, refill the bowl with water. Remember to unplug the power cord from the power source. Refer to: 'PREPARING FOR USE /Step 2 Filling the Bowl Base'.

AFTER EACH USE

1. **Always switch off the Vaporiser** at the power point and disconnect the power cord after use or when it has finished steaming.
2. **Cleaning and maintenance**
Remove the Heating Element and empty any unused water from the Bowl Base. Always rinse out and dry the bowl thoroughly. To clean the Heating Element rinse the lower part taking care not to immerse the power cord in water. Wipe the outside of the Vaporiser with a damp cloth if necessary. Dry all components thoroughly in preparation for next use.
* 'Hard/mineralised' water areas - Add two TAAV Vaporizer Cleaning Tablets each time you use the vaporiser to prevent build-up of residue/scale.

TROUBLE SHOOTING

1. **Hot water spits/spurts out of the steam vent**
Reason: Inhalant added to water already in the bowl; Incorrect inhalant or more than required amount added; Water level too high or too low; Vaporiser needs to be cleaned
Quick Fix: Shake inhalant bottle well before use making sure inhalant is added to bowl **BEFORE** pouring in water, then mix in well. Only use TAAV Mentholaire Vaporizer Fluid. Required amount is **no more than 2 capfuls**. Always fill bowl to 'Max fill line'. **DO NOT OVERFILL.** Clean the unit and use TAAV Vaporiser Cleaning Tablets.
2. **Too much steam/condensation being produced**
Reason: The vaporiser has been placed in a poorly ventilated room or confined space.
Quick Fix: Re-position the Vaporiser safely to a more open area or leave window/door slightly ajar.
3. **Insufficient steam being produced**
Reason: Mineral residue/scale has been built up in and around the heating element after constant use.
Quick Fix: Clean once after intervals of 2-3 uses. In 'hard/mineralised water areas, clean after every use, adding two cleaning tablets to prevent build-up.
4. **Steaming has ceased but the orange light is on**
Reason: The unit cuts off automatically when the water level has dropped to below the minimum required amount to produce steam. The light turns off when the Heating Element is not drawing power but comes back on when cooled down.
Quick Fix: Turn the unit off at the powerpoint and unplug from socket when steaming has ceased or when not using. To continue use, refill with water. Refer to instructions.
5. **There is an unusual smell coming from the Vaporiser.**
Reason: The Vaporiser has been left on with no water for at least an hour. The smell relates to the residue in the bowl after constant use. Note that if the unit is still working, its overall effectiveness will not be affected.
Quick Fix: Clean the bowl - Fill with water up to 'Max Fill Line' and add 2 Vaporizer Cleaning tablets. Turn the unit on for an hour for the tablets to take effect. Empty the bowl, rinse again and dry thoroughly.
6. **The Vaporiser tripped the safety switch/blew a fuse**
Reason: An additional load has been placed on the circuit and in some households, the safety switch reacts to this.
Quick Fix: Turn the Vaporiser off and remove plug from power source. Re-connect to a different power point that does not have any other appliances attached.
